Subject: Pleasant Valley General Plan Draft 2009

Hi Gregg,

Per our conversation today, you may want to provide comment on the 300 ft. buffer zone in each stream channel entering the valley in the "Pleasant Valley General Plan Draft 2009."

<http://www.carbon.utah.gov/pandz/PleasantValley/PleasantValley.htm>

In the website above, click the "Pleasant Valley General Plan Draft 2009" tab, click on the "Sensitive Lands" map.

Zoning for the area is found at the website below.

<http://ims.carbon.utah.gov/zoning/mainpage.asp>

On the right hand side of the page it says "Zoning Information" and underneath are search options. Scroll down below those search options to the "layers," "legend," and "views" tabs. Choose the "view" tab. Then choose "Scofield." After the view loads, you can use the navigation tools to zoom in or out. The location of the proposed shafts is in the WS (watershed) zone.

See sections 5.4 and 5.14 of the Carbon County Development code

<http://www.carbon.utah.gov/pandz/Documents.htm>

for information on the process for obtaining a construction permit from the County. Maybe in your discussion with Dave Levanger about the construction permit, you could verify how far up the canyon the road is public.
